

# MILSATCOM Industry Days

## 16 - 20 June 2003

### ***Wideband Communications Antenna System***

**Lt. Col. John Loschiavo  
ESC/MCV  
Hanscom AFB, MA**

**Mr. Leo Darian  
The MITRE Corporation**

# ***Goals of Industry Interaction***

## **Wideband Antennas**

## **Goals Motivation**

## **Network Centric Support**

## **Mission Needs**

## **Technical Requirements**

## **Technical Challenges**

## **Cost Methodology**

## **The Way Ahead**

- Present the drivers for a new airborne antenna system
- Survey industry activities
- Assess maturity of the different technologies
- Focus future industry R&D to meet warfighter needs
- Request industry input into technical requirements
- Request industry input into acquisition strategy formulation
- Request industry input into capabilities vs. cost drivers

***Successful program dependent on Government/Industry team***

# Motivation: Enable Dynamic Network Connectivity & Platform Missions

# Network Centric Support

## Wideband Antennas

## Goals Motivation

## Network Centric Support

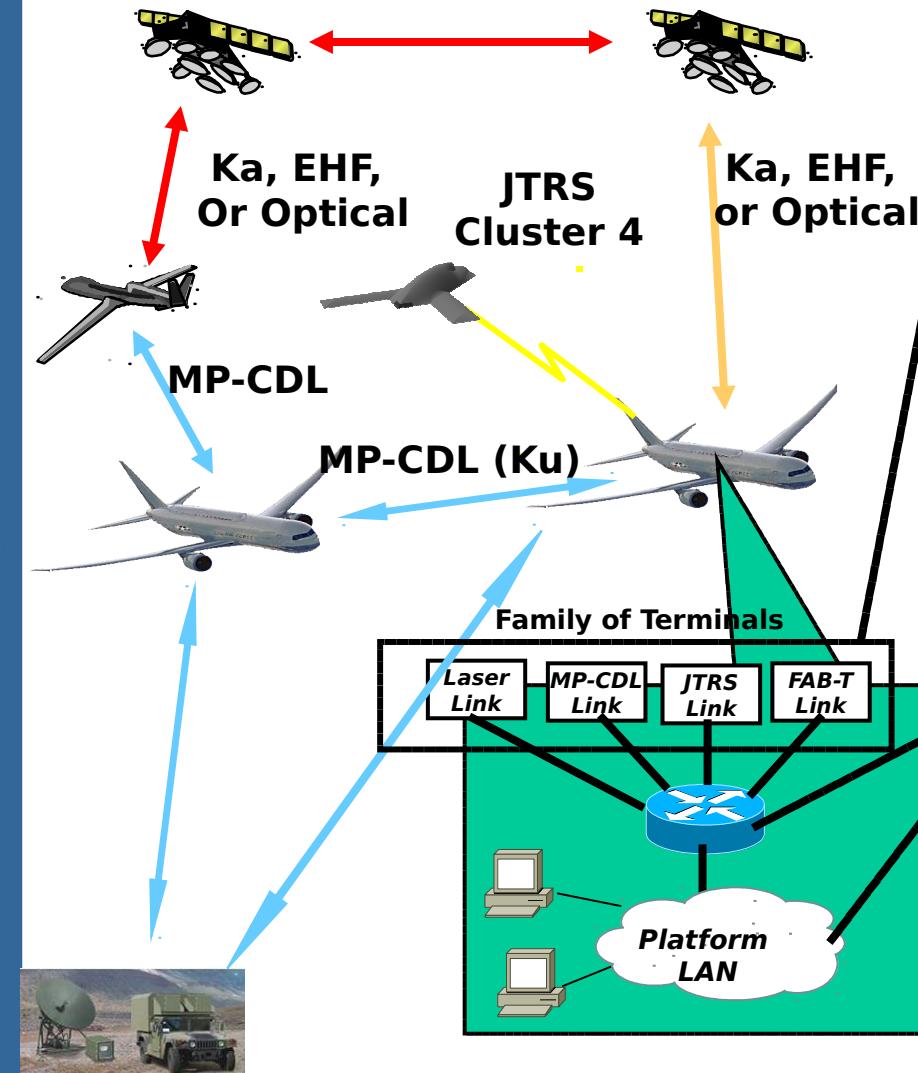

## Mission Needs

## Technical Requirements

## Technical Challenges

## Cost Methodology

## The Way Ahead

- Network-enabled links
  - Multiple communication solutions to airborne platforms
- Integrating network architecture
  - Internetworking between comm solutions creates robust network
  - Link diversity increases network and application availability
- Network-enabled platform infrastructure
  - On-board LAN extends network capability to end users
- Family of Terminals dynamically supports reconfigurable network topology

# Mission Needs

# Frequency Requirements

## Wideband Antennas

## Goals Motivation

## Network Centric Support

## Mission Needs

## Technical Requirements

## Technical Challenges

## Cost Methodology

## The Way Ahead

- Create antenna architecture to meet operational requirements of multiple communications systems
  - **AEHF (wideband Milstar)**
  - **Wideband Gapfiller System (WGS)**
  - **Global Broadcast System (GBS)**
  - **Commercial Ku and Ka**
  - **Transformational Communications System (TSat and APS)**
    - Optical communications is on the horizon
  - **Common Data Link (CDL)**
- Multiple simultaneous steerable beams

Transmit	Receive
<b>43.5-45.5 GHz RHCP</b>	<b>20.2-21.2 GHz Dual CP</b>
<b>27.5-30.0 GHz Dual CP</b>	
<b>30.0-31.0 GHz RHCP</b>	<b>17.3-20.2 GHz Dual CP</b>
<b>14.0-14.5 GHz Dual Polarization</b>	<b>10.95-12.75 GHz Dual Polarization</b>
<b>14.4-14.65 GHz LHCP</b>	<b>14.9-15.2 GHz LHCP</b>

***Need Industry Input into the Evaluation of  
Associated Cost and Complexity to Meet the  
Requirements***

# Coverage Requirements

Wideband

Antennas

Goals

Motivation

Network  
Centric  
Support

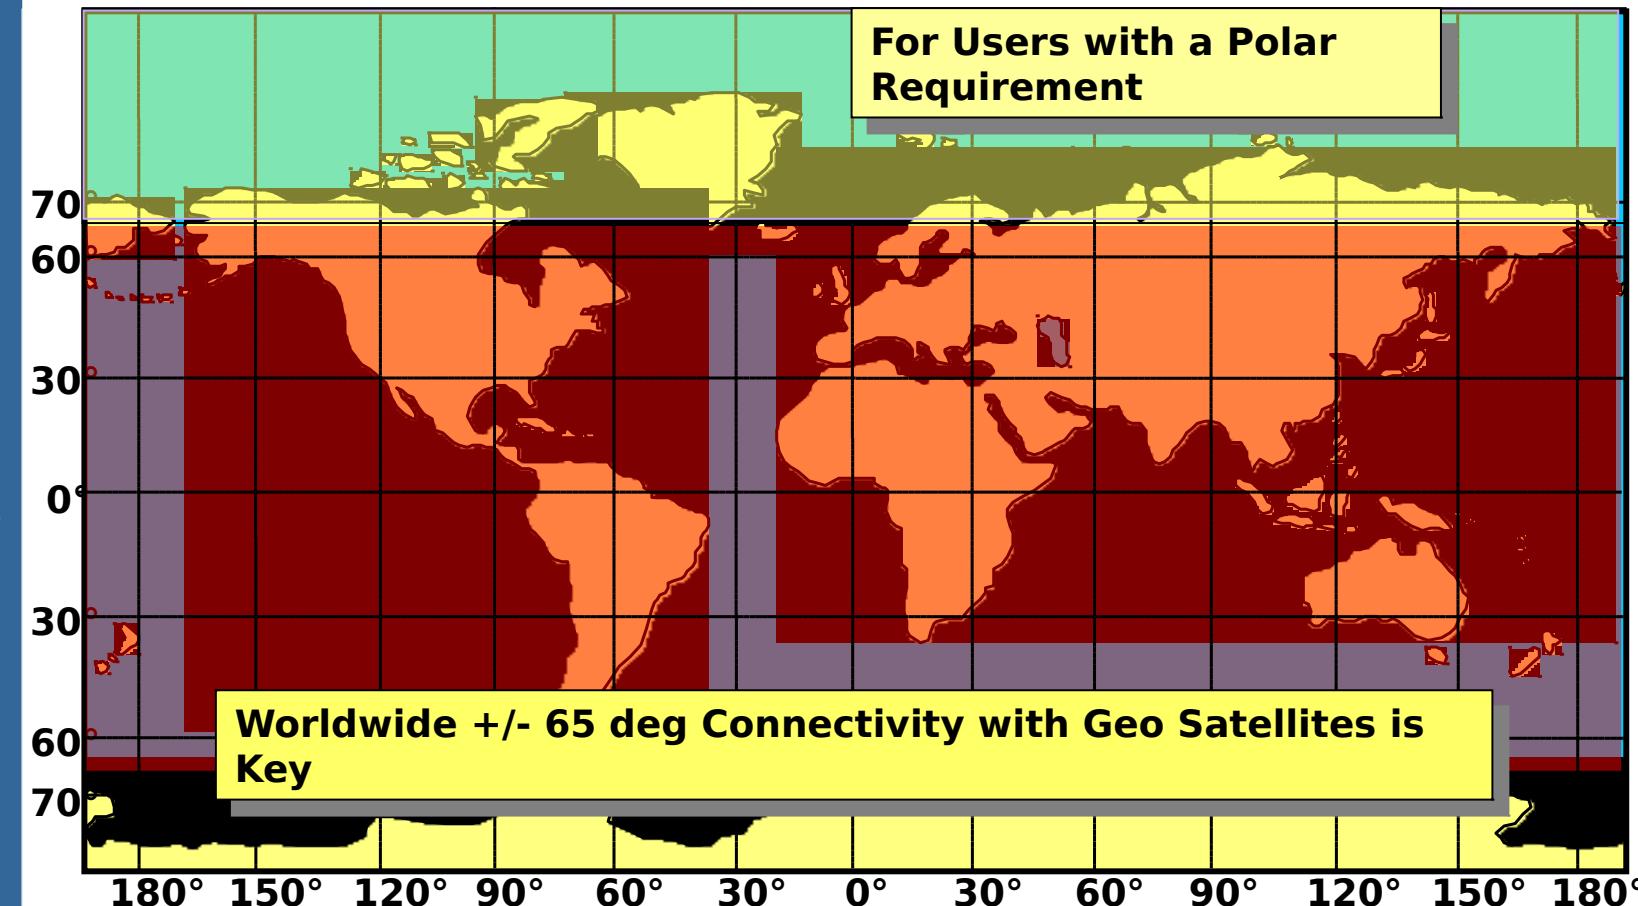

Mission  
Needs

Technical  
Requirements

Technical  
Challenges

Cost  
Methodology

The Way  
Ahead

Meet or exceed today's requirement of 5 to 90 degrees in elevation and 360 degrees in azimuth

# **Size & Form Factor Requirements**

## **Wideband Antennas**

Goals  
Motivation

Network  
Centric  
Support

Mission  
Needs

Technical  
Requirements

Technical  
Challenges

Cost  
Methodology

The Way  
Ahead

- Minimal to no penetration into the airstream - minimize drag
  - **Seeking information regarding ability of concept to support conformal installation**
- Minimal fuselage penetration (ex: only cutouts for data and power cables)
- Minimal structural modification to fuselage

***Will Seek Contractor Analysis of Antenna Impact on Aircraft Performance***

# **"Scalability" Requirements**

**Wideband  
Antennas**

**Goals  
Motivation**

**Network  
Centric  
Support  
Mission  
Needs**

**Technical  
Requirements**

**Technical  
Challenges**

**Cost  
Methodology  
The Way  
Ahead**

- Desire a scalable architecture adaptable to meet user/network connectivity and mission requirements
- Antenna aperture to be scaled in size (one or more modules)
  - **To meet antenna requirements of different types of platforms**
- Common antenna building-blocks provide significant cost reductions (development, manufacturing, maintenance)

**Need Industry Input into Feasibility to Meet the Scalability Requirements**

# **Pattern & Beam Control Requirements**

**Wideband  
Antennas**

Goals  
Motivation

Network  
Centric  
Support

Mission  
Needs

Technical  
Requirements

Technical  
Challenges

Cost  
Methodology

The Way  
Ahead

- Beam Control
  - **Signal tracking - Ability to locate and track signals through platform maneuver**
  - **Seamless hand off between apertures**
  - **Co-boresight accuracy - maintain alignment of transmit and receive beams**
  - **Beam update rate - Maintain beam alignment while hopping**
  - **Beam calibration - Accurately and effectively determine relative beam positions**
  - **Real-time beam management - interference mitigation through sidelobe control**

# **Pattern & Beam Control Requirements (Concl.)**

## **Wideband Antennas**

### **Goals Motivation**

### **Network Centric Support**

### **Mission Needs**

### **Technical Requirements**

### **Technical Challenges**

### **Cost Methodology**

### **The Way Ahead**

- Sidelobe envelope
  - Specified for each frequency band
  - Driven by waveform
  - Negotiated by Joint Spectrum Center
  - Commercial bands defined by ITU
- Axial ratio
  - Long term satellite design concern
    - Orthogonal polarizations being proposed off same satellite
    - High axial ratio generates interference
  - Industry to address how accurately axial ratio can be controlled over FOV

# **Additional Requirements**

**Wideband  
Antennas**

Goals  
Motivation

Network  
Centric  
Support

Mission  
Needs

Technical  
Requirements

Technical  
Challenges

Cost  
Methodology  
The Way  
Ahead

- RF emissions requirements
  - **Out of band emissions**
  - **Phase Noise**
  - **Linearity**
- S/V
  - **Survivability, static electricity, and lightning strike requirements from FAB-T need to be re-evaluated**
  - **Radome is design element in meeting these requirements**
- Interface to FAB-T
  - **FAB-T TRD specifies open and standard interface**
  - **Contractor must conform to interface under development by FAB-T prime**

# Requirements Environment

## Wideband Antennas

## Goals Motivation

## Network Centric Support

## Mission Needs

## Technical Requirements

## Technical Challenges

## Cost Methodology

## The Way Ahead

- Antenna will be key component within TC, Family of Terminals, FAB-T, and Platform environment
  - **“ilities” initially derived from multiple sources**
- Cost of some requirements are interrelated depending on how addressed in operational system
  - **Reliability**
  - **BIT**
  - **Maintainability**
- Need to balance all these requirements

***Request industry input into tradeoffs which will influence system***

# **Technical Challenges to Performance, Producibility, and Affordability**

**Wideband  
Antennas**

**Goals  
Motivation**

**Network  
Centric  
Support**

**Mission  
Needs**

**Technical  
Requirements**

**Technical  
Challenges**

**Cost  
Methodology**

**The Way  
Ahead**

- Government has desire to focus on areas that address technical challenges
- Seeking technical trade-space to include the following technical elements:
  - **Beam forming and beam steering over FOV**
    - Digital interface to terminal could make design more scalable
  - **Thermal management**
  - **Power Amplification**
  - **Monolithic process technologies**
  - **Manufacturing processes**

# Cost Methodology

Wideband  
Antennas

Goals  
Motivation

Network  
Centric  
Support

Mission  
Needs

Technical  
Requirements

Technical  
Challenges

Cost  
Methodology

The Way  
Ahead

- Government desires improved cost modeling capabilities
  - **Early focus on identifying installation costs**
  - **Insight into other cost drivers**
- One-on-one discussions to go over cost estimate methodology
  - **Request industry input into production & installation cost estimating methodologies**
  - **Would like to understand individual cost models**

***Government would like to be able to use your cost models***

# **Candidate Platforms**

# Wideband Antennas

# Goals

# Motivation

# Network Centric Support

# Mission Needs

## Technical Requirements

## Technical Challenges

# Cost Methodology

# The Way Ahead

## ***Everything that Flies, Drives, Walks, or Floats***

# Strategy

## Wideband Antennas

## Goals Motivation

## Network Centric Support

## Mission Needs

## Technical Requirements

## Technical Challenges

## Cost Methodology

## The Way Ahead

- Government has identified areas that are key to success
- Government developing understanding of market state of the art in key technologies and processes in order to refine our baseline
- Getting together (1-on-1)
  - **Understanding your capabilities and the current state-of-the-art**
  - **Understand the realm of the possible alternatives**
    - Cost, schedule, capability, etc...
  - **Listen to your thoughts about a program strategy**
- Develop a Strategy that Makes Sense
  - **2<sup>nd</sup> Industry Day is a possibility**
- Most Important of All: Teamwork

# Summary

## Wideband Antennas

## Goals Motivation

## Network Centric Support

## Mission Needs

## Technical Requirements

## Technical Challenges

## Cost Methodology

## The Way Ahead

- Moving towards the environment of TC, FoT, and Platform/Mission specific communications
  - **Operational requirements still being drafted**
- There are technology challenges
- Need to balance capabilities against cost drivers
- Market research will help structure program requirements
- Industry inputs through one-on-ones and ongoing dialogue necessary/desired

**We are Open To All Workable Solutions**
